

Criminal Justice Information Systems (CJIS) Curriculum

REFLARE CERTIFIED SECURE EMPLOYEE (RCSE)

A CJIS compliant IT security awareness training program for all users accessing CJI technology and data.

Meet Compliance Standards: Users who handle incident, biometric, property, biographic, or identity data must comply with CJIS standards. This requirement extends to authorized third parties and private contractors. RCSE CJIS ensures all users, regardless of their prior technical knowledge, are quickly up-skilled and compliant on the infosec fundamentals of CJIS requirements.

Fully customizable: RCSE allows training administrators to supplement the lessons with their own content. Easily reinforce your organization's IT security messaging at the touch-points that matter most.

Token or Bundle Pricing: One token = one lesson, and each lesson is the same price. Select the CJIS bundle or individually select specific modules to maintain control over your IT security training spend.

RCSE Modules for Non-Tech Employees	Core Basics	CJIS
Module 001: Security Awareness Essentials	✓	✓

Simple to Implement

BROWSER BASED: No requirements to install new software or buy/maintain costly servers to host training, as Reflare is entirely web-based, including the hands-on challenges. The only thing end-users need to access training is a web-connected device running a current HTML5 compatible browser.

PERSONALIZED: With AI technology providing customized voiceovers, there is no need to re-record audio when your policies or organization changes. Audio updates can be done in less than a minute, in-house, for no additional charge. With the click of a button, trainees will see and hear updates instantly.
