

Compliance for PCI 3DS Core Security Standard

Protect yourself with the PCI 3DS protocol and respective core function specifications.

Meet your PCI-DSS needs: Reflare's strategic alliance with Dot.Bit delivers cost-effective PCI 3DS solutions for your technologies and teams. Our integrated training and audit offering helps you achieve all your compliance requirements.

The PCI 3DS Standard is Enforced by All Major Payment Brands

This standard contains a complete set of requirements for the secure management, processing, and transmission of personal identification number (PIN) data during online and offline payment card transaction processing at ATMs and point-of-sale terminals.

These requirements are based on industry standards and are enforced by the major payment brands.

Who is PCI 3DS for?

The PCI 3DS Security Standard is for acquirers and/or their agent(s) who handle or process credit card transactions and those who are required to secure the management, processing, and transmission of digital payments. PCI 3DS compliance helps reduce card-not-present payment frauds and assures security to payment service providers.

PCI 3DS represents a baseline of technical and operational requirements designed to protect cardholder data and is maintained by PCI Security Standards Council (PCI SSC) – a global forum for the ongoing development, enhancement, storage, dissemination and implementation of security standards for account data protection.

Gap Analysis and Remediation

- Understanding compliance and validation requirements of the current PCI 3DS Core Security Standard
- Defining 3DS Data Environment scope
- Guidelines on identifying and implementing appropriate security controls to protect the 3DS transaction process
- Developing a customised plan for achieving and maintaining compliance with the PCI 3DS Core Security Standard
- Creating documentation to support the PCI 3DS Assessment

3DS Attestation

- Assessments against 3DS Core Security Standard

Reporting

- Report on Compliance (Roc)
- Attestation of Compliance (AoC)

Before the final audit, our professional consultants will guide and prepare you for the certification process. The Dot. Bit team of highly skilled Qualified Security Assessors (QSA) will perform the audit and upon determining the compliance, submit the RoC and AoC to attest to the results of a PCI DSS 3DS assessment.
