

Compliance for PIN Data and Key Management

Protect yourself and your customers when acquiring, processing and managing cardholder and transaction data.

Meet your PCI DSS needs: Reflare's strategic alliance with Dot.Bit delivers cost-effective PCI PIN solutions for your technologies and teams. Our integrated training and audit offering helps you achieve your compliance requirements.

The PCI PIN Standard is Enforced by All Major Payment Brands

The Payment Card Industry Data Security Standard is a set of security standards designed to ensure that all companies that accept, process, store or transmit credit card information maintain a secure environment.

It is aimed at all entities involved in payment card processing (merchants, processors, acquirers, issuers, and service providers) as well as all other entities that store, process or transmit cardholder data and/or sensitive authentication data.

Who is PCI PIN for?

The PCI PIN Security Standard is for acquirers and/or their agent(s) who handle or manage PIN data, those who are involved with key management that protect PINs associated with payment transactions, and those who are required to secure the management, processing, and transmission of PIN data at ATMs, POS terminals and attended payment points.

PCI PIN represents a baseline of technical and operational requirements designed to protect cardholder data and is maintained by PCI Security Standards Council – a global forum for the ongoing development, enhancement, storage, dissemination and implementation of security standards for account data protection.

The three primary objectives of the standard are to;

1. Identify the minimum-security requirements for PIN-based interchange transactions,
2. Outline the minimum acceptable requirements for securing PINs and encryption keys, and
3. Assist all retail electronic payment system parts.

The standard is organised into seven key components, referred to as 'Control Objectives', and each Control Objective has its own set of requirements. Entities may be subject to different requirements in multiple sections, depending on the activities performed.

How do we help?

We remove PCI DSS ambiguity – As a standard a part of our support, we will:

- Understanding compliance and validation requirements of the current PCI PIN Security Standard,
- Identifying locations, processes, procedures, personnel, and equipment that need to be reviewed, and ensuring that it is factored into the overall timeline for the assessment,
- Engaging with the payment brands to ensure all aspects of your business are covered,
- Building an overall assessment plan and preparing you for the assessment,
- Conducting an onsite assessment, and
- Reporting and notifying the payment brands of your compliance status.
